左图中，A和B分别表示预测出的区域平均财富指数和调查结果

任课教师简介

金耀辉，上海交通大学·人工智能研究院 长聘教授

- 上海交通大学智慧法院研究院副院长、人工智能研究院总工程师
- 提升政府治理能力大数据应用技术国家工程实验室 专家委员会委员
- 木兰开源社区技术委员会委员
- 上海市公共数据开放专家委员会成员

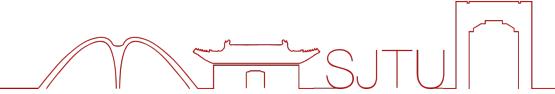

研究领域：长期从事**人工智能和通信网络**应用研究，近年来专注数据治理与共享架构、自然语言理解与深度学习、时空数据挖掘与应用，特别是人工智能与法律人文、公共管理**交叉研究**

项目经验：科技部863计划“高性能宽带通信网”重大专项任务专家组副组长，**科技部重点研发计划“全流程管控的精细化执行技术及装备研究”**（2018-2021）项目负责人，**科技部重点研发计划“法检司协同分布式大数据融合关键技术研究”**（2023-2026）项目负责人，**上海市科技进步一等奖**

主要成果：近5年在AAAI、IJCAI、MM、ACL、EMNLP、COLING等**人工智能领域顶会**上发表论文21篇，拥有发明专利18项

任课教师简介

许岩岩，上海交通大学·人工智能研究院 长聘教轨副教授

- 博士后研究员 / UC Berkeley (2018-2020)
- 博士后研究员 / MIT (2015-2018)
- 客座博士后研究员 / 劳伦斯伯克利国家实验室 (2017-2018)

研究领域：人工智能交叉应用、人类动力学、复杂系统建模与优化、计算城市科学

科研课题：

- 国家海外优秀青年基金 (2021年)
- 上海市海外领军人才 (2021)
- 上海市浦江人才计划 (2021)
- 国家自然基金青年项目 (2021)
- 科技部重点研发子课题 (2022)
- 科技合作：工商银行、eBay、联通数科、上海电信

学术成果：

- 发表SCI及人工智能会议学术论文30余篇
- 自然子刊 **Nature Energy (IF=67)**
- 科学子刊 **Science Advances (IF=14)**
- 人工智能顶级会议 IJCAI等
- J. R. Soc. Interface (英国皇家学会旗舰综合期刊)

课程简介与课程目标

- ▶ 随着大数据与人工智能技术的发展，科学家可以利用数据驱动和自然科学的方法量化人类行为与建模复杂的社会现象，提升人类社会福祉，也催生了理、工、文交叉的当代社会科学研究新范式——**计算社会科学**。
- ▶ 本课程将介绍**计算社会科学研究问题与研究方法**，引导学生从交叉学科、系统科学的视角探究社会发展进程中的重要问题及学习潜在解决方案。

课程结构

章节	教学内容	学时	学习目标
第一章	介绍计算社会科学的发展历程、基本概念和问题	2	
第二章	大数据视角下的计算社会科学典型研究方法	2	
第三章	社会数据处理与分析方法	4	使用Python语言完成经济数据处理与可视化
第四章	计算社会科学典型研究场景	4	寻找现实生活可利用数据研究的社会现象或场景，并给出解决思路
第五章	复杂网络科学	4	
第六章	社会系统建模方法	6	使用Python建立简易的ABM模型，实现传染病传播模拟
第七章	社会数据挖掘与人工智能分析方法	6	使用Python编写AI模型，实现对居民出行需求的预测
第八章	经典研究工作解读	2	
第九章	小组课程项目汇报	2	完成项目答辩，提交课程项目论文

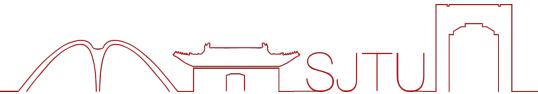

- (1) 出勤与课堂表现: 10%
- (2) 平时作业: 30%
- (3) 课程项目 60%，其中课程项目演讲30%，课程论文30%。注：每个项目小组由3名同学组成，1名老师或博士生单独指导，**课程论文鼓励投稿发表。**

学术规范

- 在规定的时间之前提交作业
- 鼓励交流讨论，但是作业要独立完成

上海交通大学
SHANGHAI JIAO TONG UNIVERSITY

什么是计算社会科学

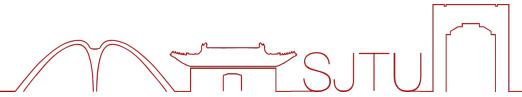

- ▶ From Wikipedia:
- ▶ Computational sociology is a branch of sociology that uses computationally intensive methods to analyze and model social phenomena. Using computer simulations, artificial intelligence, complex statistical methods, and analytic approaches like social network analysis, computational sociology develops and tests theories of complex social processes through bottom-up modeling of social interactions.

计算社会学是社会学的一个分支，它使用计算密集型方法来分析和模拟社会现象。使用计算机模拟、人工智能、复杂的统计方法和社会网络分析等分析方法，计算社会学通过对社会互动进行自下而上的建模，发展和测试复杂社会过程的理论。

计算社会科学发展历史-缘起

计算社会科学的“前身”：定量社会科学的发展。

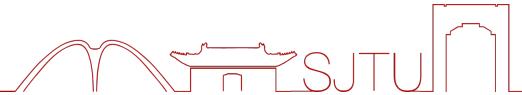

按照哈佛大学定量社会科学研究所主任、著名方法论学者加里·金 (Gary King) 的解释，**定量社会科学**不仅是指长期以来社会科学发展历程中相对于质化研究而言的量化研究方法，而且是经历了近十年的突破发展而引发当代社会科学转型的一股浪潮。

Gary King

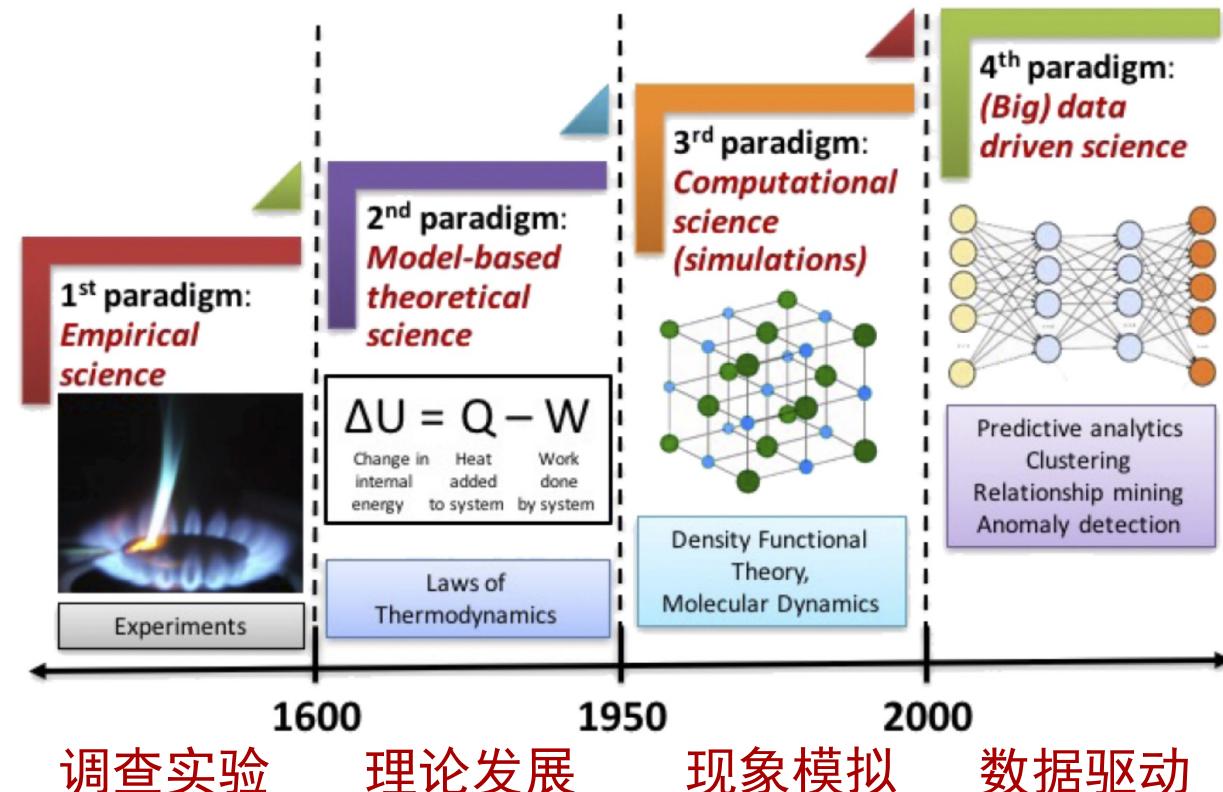

计算社会科学发展历史-缘起

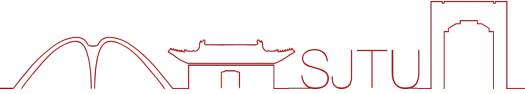

计算社会科学的创生：新兴学科本体论的探讨。

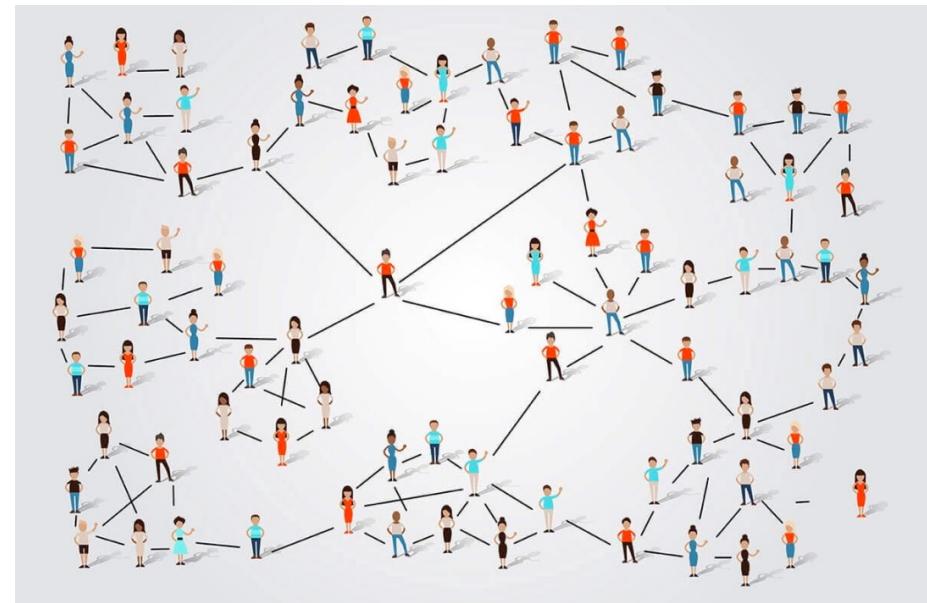

20世纪后半叶以来，社会科学发展的趋势正是研究者自发地使用海量数据开展以纯理论或应用为目的研究。

计算社会科学的发展蓄势 —— 网络科学

- ▶ 社会系统涉及到大量异构实体的相互作用，**网络科学**迅速发展为社会分析提供了强有力的数据分析手段。
- ▶ 2007年，“小世界网络之父”奠基人邓肯·瓦茨在 Nature 发表了题为《A twenty-first century science》的文章，这成为计算社会科学时代即将来临的标志之一。这篇文章采用了网络分析的方法来分析社会现象中的网络偏好以及个体选择的问题。

小世界网络，后来也被称作W-S网络，源自对六度空间理论的类比，是一种介于随即网络和规则网络间的模型

计算社会科学 —— 社会科学的全新研究范式

SOCIAL SCIENCE

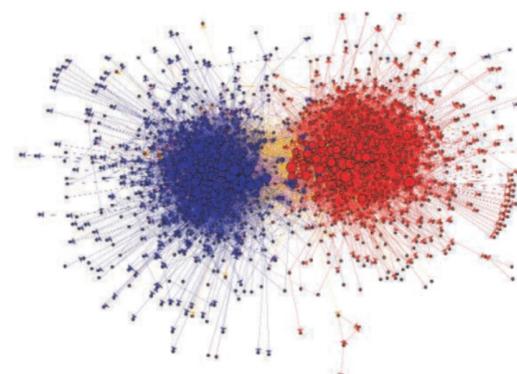

Computational Social Science

David Lazer,¹ Alex Pentland,² Lada Adamic,³ Sinan Aral,^{2,4} Albert-László Barabási,⁵ Devon Brewer,⁶ Nicholas Christakis,¹ Noshir Contractor,⁷ James Fowler,⁸ Myron Gutmann,⁹ Tony Jebara,⁹ Gary King,¹ Michael Macy,¹⁰ Deb Roy,² Marshall Van Alstyne^{2,11}

We live life in the network. We check our e-mails regularly, make mobile phone calls from almost any location, swipe transit cards to use public transportation, and make purchases with credit cards. Our movements in public places may be captured by video cameras, and our medical records stored as digital files. We may post blog entries accessible to anyone, or maintain friendships through online social networks. Each of these transactions leaves digital traces that can be compiled into comprehensive pictures of both individual and group behavior, with the potential to transform our understanding of our lives, organizations, and societies.

The capacity to collect and analyze massive amounts of data has transformed such fields as biology and physics. But the emergence of a data-driven “computational social science” has been much slower. Leading journals in economics, sociology, and political science show little evidence of this field. But computational social science is occurring—in Internet companies such as Google and Yahoo, and in govern-

A field is emerging that leverages the capacity to collect and analyze data at a scale that may reveal patterns of individual and group behaviors.

Data from the blogosphere. Shown is a link structure within a community of political blogs (from 2004), where red nodes indicate conservative blogs, and blue liberal. Orange links go from liberal to conservative, and purple ones from conservative to liberal. The size of each blog reflects the number of other blogs that link to it. 计算社会科学——大数据带来的机遇

- 在2012年，R. Conte , C. Cioffi-Revilla等14位欧美学者在《The European Physical Journal Special Topics》（第1期）上联合发布了一份《计算社会科学宣言》，力图呼唤一场社会科学革命。
- The increasing integration of technology into our lives has created unprecedented volumes of data on society's everyday behaviour. Such data opens up exciting new opportunities to work towards a quantitative understanding of our complex social systems, within the realms of a new discipline known as Computational Social Science. Against a background of financial crises, riots and international epidemics, the urgent need for a greater comprehension of the complexity of our interconnected global society and an ability to apply such insights in policy decisions is clear.

Computational social science: Obstacles and opportunities

Data sharing, research ethics, and incentives must improve

By David M. J. Lazer^{1,2}, Alex Pentland³, Duncan J. Watts⁴, Silian Arias⁵, Susan Athey⁶, Noshir Contractor⁷, Paul Freelon⁸, Sandra Gonzalez-Bailon⁹, Gary King¹⁰, Helen Margolis^{11,12}, Alondra Nelson^{13,14}, Matthew J. Salganik¹², Markus Strohmaier^{13,14}, Alessandro Vespignani¹, Claudia Wagner^{13,15}

The field of computational social science (CSS) has exploded in prominence over the past decade, with thousands of papers published using observational data, experimental designs, and large-scale simulations that were once unfeasible or unavailable to researchers. These studies have greatly improved our understanding of important phenomena, ranging from social inequality to the spread of infectious diseases. The institutions supporting CSS in the academy have also grown substantially, as evidenced by the proliferation of conferences, workshops, and summer schools across the globe, academic journals focused entirely on data, and the field has also fallen short in important ways. Many institutional structures around the field—including research ethics, pedagogy, and data infrastructure—are still nascent. We suggest opportunities to address these issues, especially in improving the alignment between the organization of the 20th-century university and the intellectual requirements of the field.

We define CSS as the development and application of computational methods to complex, typically large-scale, human (sometimes simulated) behavioral data (*I*). Its intellectual antecedents include research on spatial data, social networks, and human coding of text and images. Whereas traditional quantitative social science has focused on rows of cases and columns of variables, typically with assumptions of independence among observations, CSS encompasses language, location, and movement, networks, images, and video, with the application of statistical models that capture multifarious

in economics, from the study of inequality (2) to the dynamics of labor markets (3). There are emerging, well-resourced models of administrative data research facilities serving as platforms for analyzing microlevel data while preserving privacy (4). These offer important lessons for potential collaboration with private companies, including the development of methodologies to keep sensitive data secure, yet accessible for analyses (e.g., innovations in differential privacy).

The value proposition for private companies is different and there has been predictably less progress. Data possessed by government agencies are held in trust for the public, whereas data held by companies are typically seen as a key proprietary asset. Public accountability inherent in sharing data is likely seen as a positive for the relevant stakeholders for government agencies, but generally, far less so for shareholders for private companies. Access to data from private companies is thus rarely available to academics, and when it is, it is typically granted through a patchwork system in which some data are available through public application programming interfaces (APIs), other data only by working with (and often physically in) the company in question, and still other data through personal connections and one-off arrangements, often governed by nondisclosure agreements and subject to potential conflicts of interest.

An alternative has been to use proprietary data collected for market research (e.g., Comscore, Nielsen), with methods that are sometimes described as being structured that is prohibitive to most researchers.

We believe that this approach is no longer acceptable as the mainstay of CSS, as pragmatically as it might seem in light of the apparent abundance of such data and limited resources available to a research community in its infancy. We have two broad concerns about data availability and access.

First, many companies have been steadily cutting back data that can be pulled from their platforms (5). This is sometimes for good reasons—regulatory mandates (e.g., the European Union General Data Protection Regulation), corporate scandal (Cambridge Analytica and Facebook)—however, a side effect is often to shut down avenues of potentially valuable research. The susceptibility of data availability to arbitrary and unpredictable changes by private actors, whose cooperation with scientists is strictly voluntary, renders this system intrinsically unreliable and potentially biased in the science it produces.

MISALIGNMENT OF UNIVERSITIES
Generally, incentives and structures at most universities are poorly aligned for this kind of multidisciplinary endeavor. Training tends to be siloed. Integrating computational training directly into social science (e.g., teaching computer scientists research design) has been slow. Collaboration is often not encouraged, and too often is discouraged. Computational researchers and social scientists tend to be in different units in distinct corners of the university, and there are few mechanisms to bring them together. Decentralized budgeting models discourage collaboration across units, often producing inward-looking departments.

Research evaluation exercises such as the United Kingdom's Research Excellence Framework, which allocate research funding, typically focus within disciplines, meaning that multidisciplinary research may be less well recognized and rewarded. Similarly, university promotion procedures tend to underappreciate multidisciplinary scholars. Computational research infrastructures, at universities too often cannot fully support analysis of large-scale, sensitive data sets, with the requirements of security, access to a large number of researchers, and requisite computational power. To the extent these issues have been partially resolved in the academy (e.g., with genomic data), lessons have not fully made their way into practice in CSS.

INADEQUATE DATA-SHARING PARADIGMS
Current paradigms for sharing the kinds of large-scale, sensitive data used in CSS offer a mixed bag. There have been successes built on partnerships with government, especially

计算社会科学 VS. 社会计算

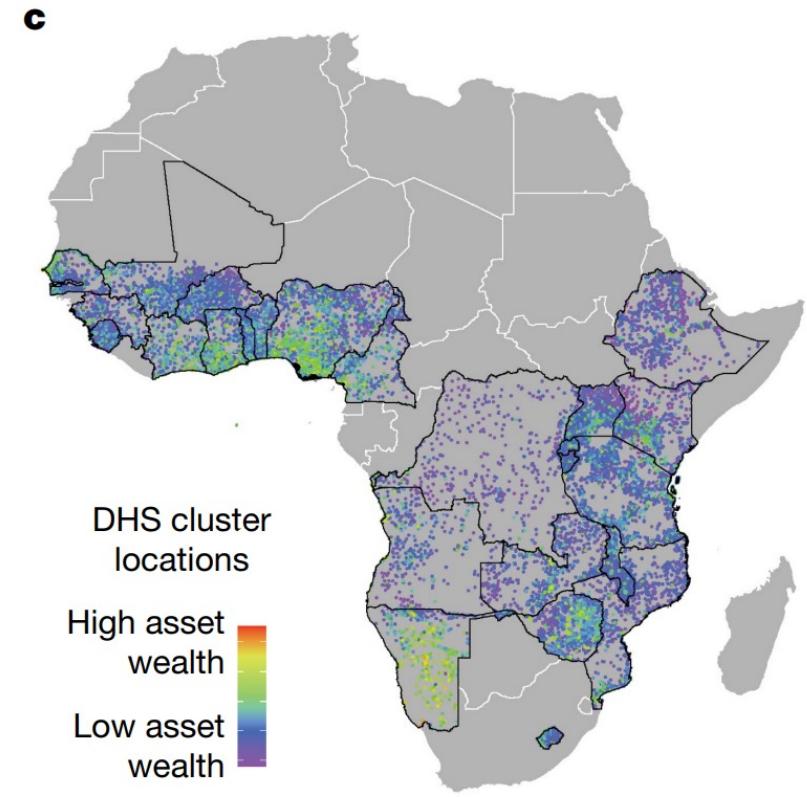

- **社会科学:**
重理论、轻数据
- **社会计算:**
重数据、轻理论
- **计算社会科学:**
理论与数据融合

Ref: · Karpatne et al. Theory-guided data science: A new paradigm for scientific discovery from data. TKDE, 2017

计算社会科学典型案例一

- ▶ 机器学习携手卫星影像，理解电力设施与经济财富的因果关系（Nature 封面文章）
- ▶ 背景：乌干达在2010-2019年将电气覆盖率从12%提升到了41%
- ▶ 问题：电网扩张如何影响低收入地区经济产出？缺少不同时/空的统计数据？因果证据？
- ▶ 利用遥感和机器学习模型预测精细空间粒度下的乌干达资产财富指标；
利用多光谱遥感数据为输入，基于撒哈拉以南非洲地区（SSA）27000个村庄的统计调查数据中的多项相关指标，构造资产财富指数作为标签，使用深度学习估计25个非洲国家2005-2018年的资产财富状况；
填补了超过已有数据10倍以上的空白数据

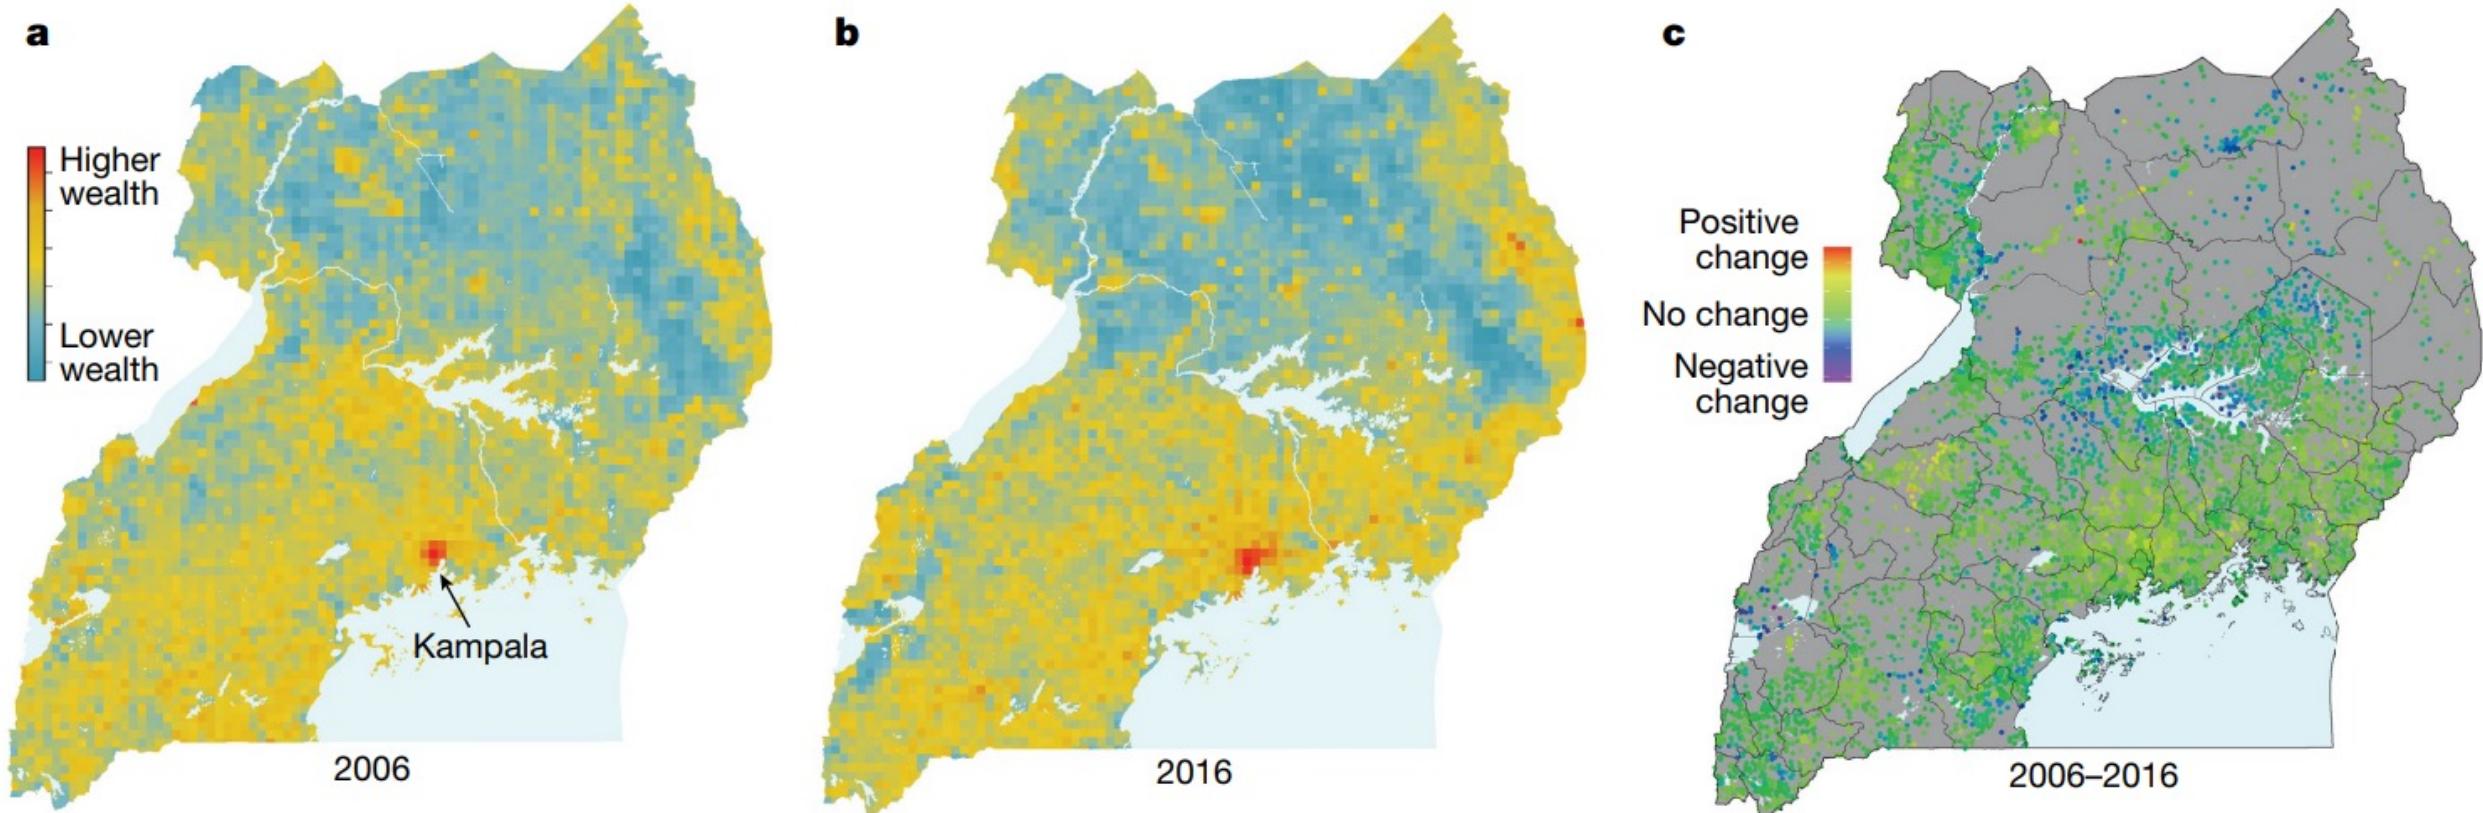

Ratledge, N., Cadamuro, G., de la Cuesta, B. et al. Using machine learning to assess the livelihood impact of electricity access. *Nature* **611**, 491–495 (2022).

计算社会科学典型案例一

► 资产财富预测模型展现出十年间的区域财富增长情况

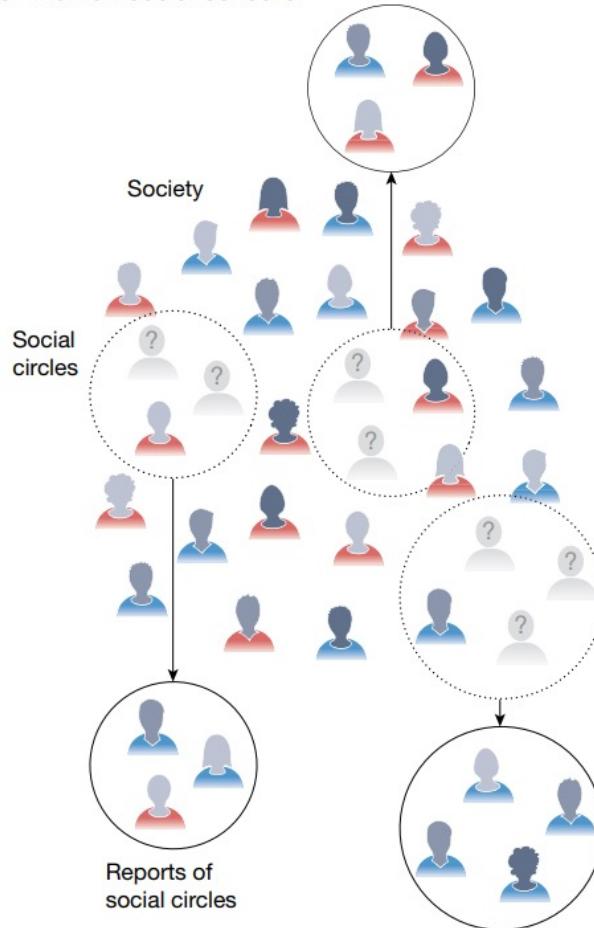

► a,b:2006和2016年的模型预测结果；c:6900个人口密集村庄的10年间财富差异

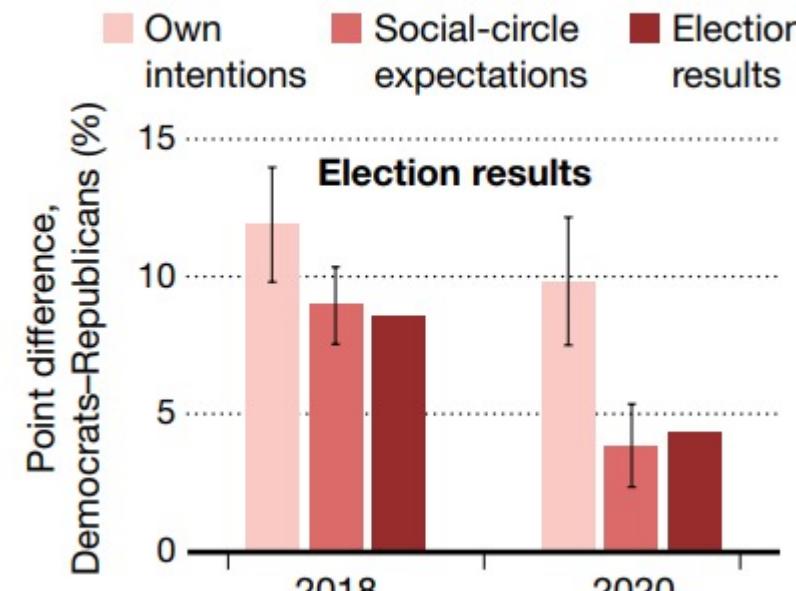

计算社会科学典型案例二

a Human social sensors

b Describing and predicting social dynamics

Galesic, M., Bruine de Bruin, W., Dalege, J. et al. Human social sensing is an untapped resource for computational social science. *Nature* **595**, 214–222 (2021).

- ▶ Human social sensing
- ▶ 人类社会感知可以为研究信仰和行为 (beliefs and behaviors) 提供更有效的信息。
- ▶ 例如2018和2020美国选举中，对社交圈的描述 (properties of their immediate social environments) 可以比询问自身倾向的抽样调查更好地预测选举结果。

你的朋友可能比你更了解你！

三、笼仔饭的困境—别人家的数据

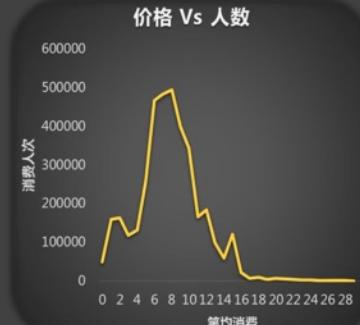

三、笼仔饭的困境—平均流水分析

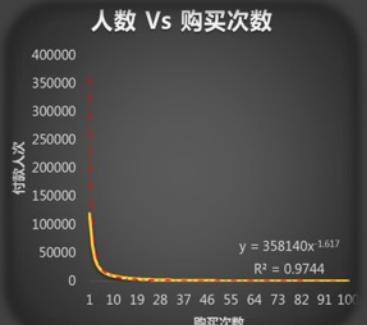

二、消费分布—价格·忠诚度

Tips

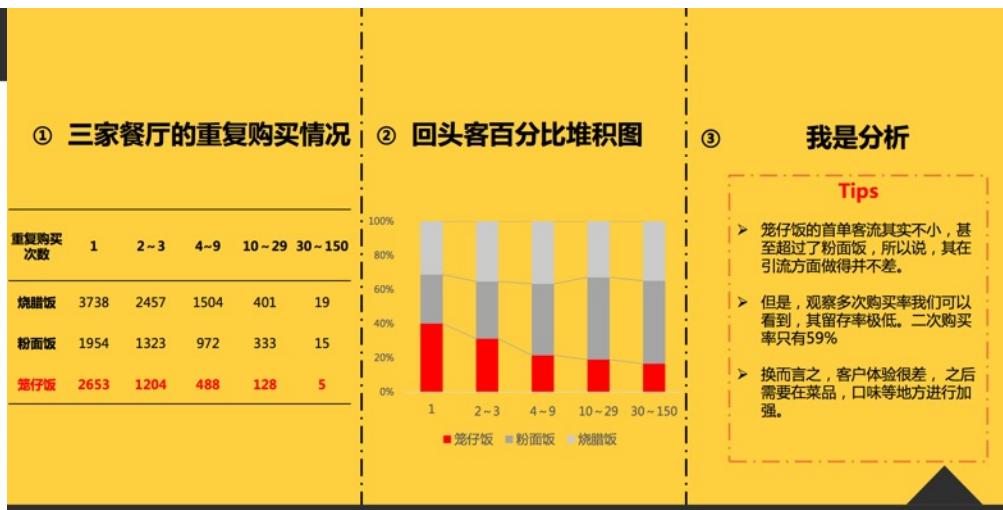

- 主要消费金额集中在7-9元左右
- 15元是大部分交大人单次消费的极限

① 每个交大人有一个对价格敏感的心

② 迷之幂曲线登场

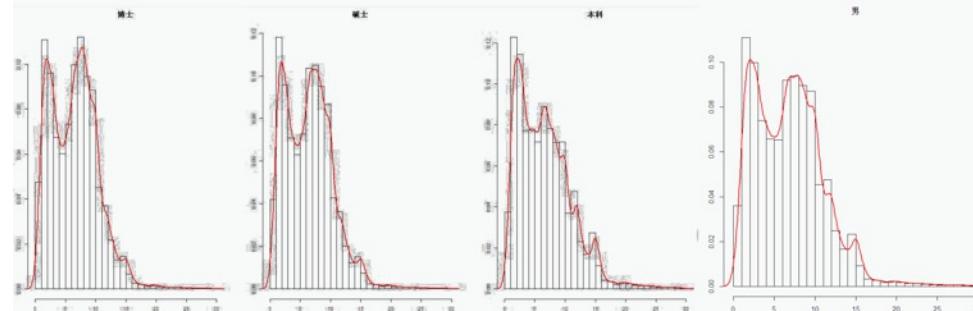

三、笼仔饭的困境—顾客忠诚度分析

精彩的结果 (4)

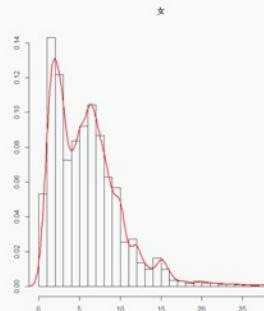

6. 每餐要花多少钱?

不同类型同学单次刷卡金额频率图

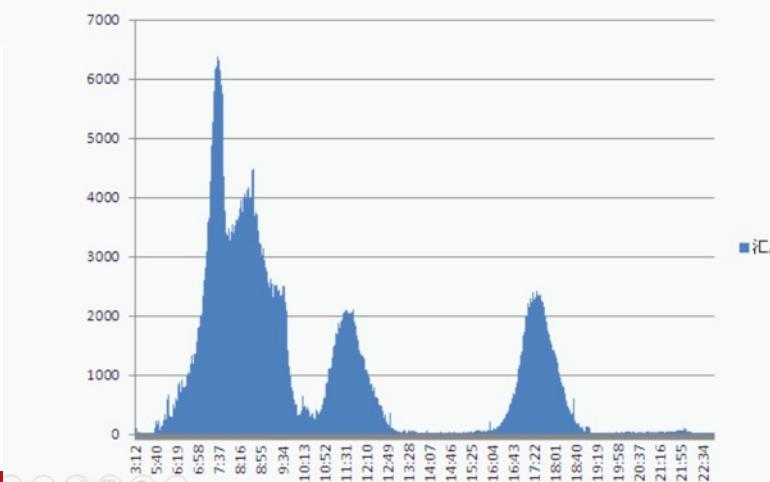

不同性别同学单次刷卡金额频率图

- 焦点1：同学们每餐刷卡金额存在两个峰值，第一个为2.5元，第二个为6-9元，可推断，第一个峰是早餐，第二个峰是正餐，研究生峰值明显，研究生正餐花更多钱（7元以上）的频率大于本科生。
- 焦点2：男生正餐花更多钱的频率大于女生。
- 焦点3：各个食堂也会比较明显地呈现出这个趋势，而如五餐这样早餐规模较小的食堂则没有明显的第一高峰。

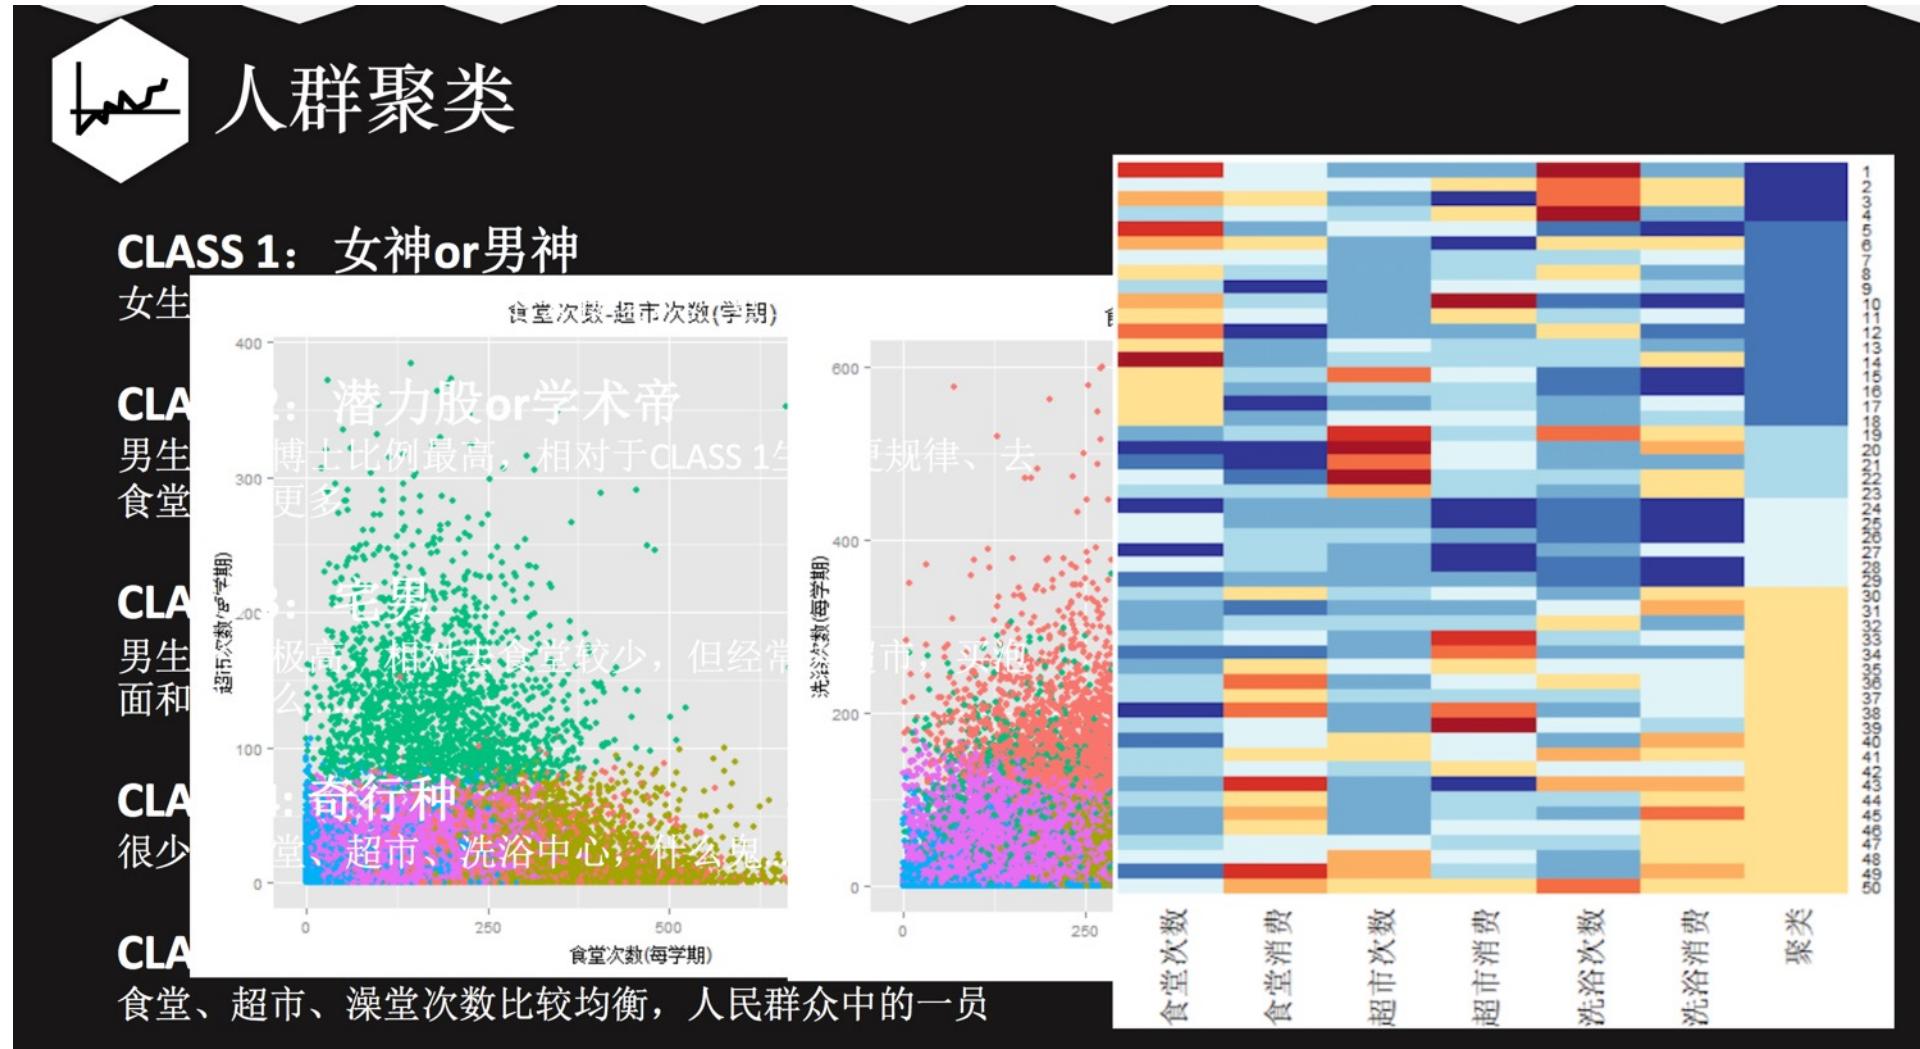

6.1 有趣的2.5元

各时段校园卡单次消费2.5元以下的频数

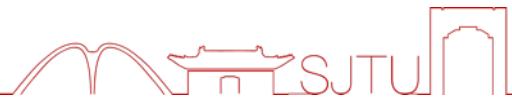

- 焦点1：单次消费2.5元以下的情况明显出现了四个峰，第一次7:20是本科生吃早饭的时间，第二次在8:30是研究生吃早饭的时间。
- 焦点2：午饭和晚饭期间分别出现了一次峰值，推测为正餐之外加了粥、包子、饼之类的辅食，加餐的频数远远低于每天吃早饭的频数。

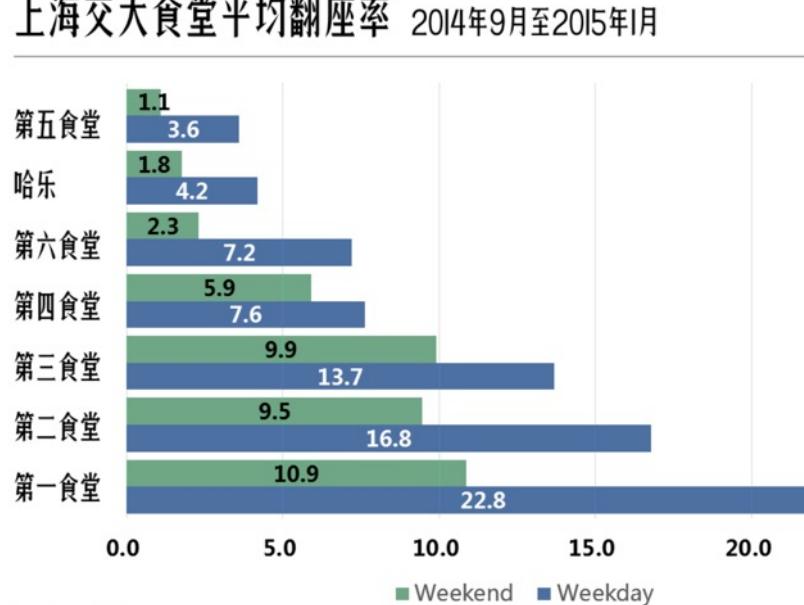

精彩的结果 (5)

精彩的结果 (6)
